

# Github Setup

Victor M. Uribe

2023-02-12

## Go to Github

Using github go to your profile on the top right of the page and then go to Developer settings which then you should click “tokens (classic)” and click “generate new token”. It will ask you for how long should the token last. Here you typically want 3 months.

github → *settings* → Developer settings → tokens (classic) → Generate new token

From here you copy it and then proceed to rstudios once you have all of it up to date.

```
# install.packages("gitcreds") # install in terminal first  
# library(gitcreds)  
# gitcreds_set() # enter your github token that you copied
```

After this your github account and rstudios should be linked
